

## Contents

<b>Foreword</b>	vii
<b>Preface</b>	ix
<b>Acknowledgements</b>	xi
<b>Introduction</b>	
BELL, F. G., CULSHAW, M. G., FORSTER, A. & NATHANAIL, C. P. The engineering geology of the Nottingham area, UK	1
<b>Geology of Megacities and Urban Areas</b>	
DE MULDER, E. & PEREIRA, J. J. Earth Science for the city	25
MARKER, B. R. Geology of megacities and urban areas	33
<b>Legacy of the Past and Future Climate Change</b>	
REES, J. G., GIBSON, A. D., HARRISON, M., HUGHES, A. & WALSBY, J. C. Regional modelling of geohazard change	49
NATHANAIL, J. & BANKS, V. Climate change: implications for engineering geology practice	65
<b>Urban Landslides</b>	
PETLEY, D. N. On the impact of urban landslides	83
<b>Planning and Geohazards</b>	
MORA, S. Disasters are not natural: risk management, a tool for development	101
GIBSON, A. D. & CHOWDHURY, R. Planning and geohazards	113
<b>Urban Site Investigation</b>	
CLAYTON, C. R. I. Urban site investigation	125
GREEN, J. A. & HELLINGS, J. Developments in urban site investigation	143
<b>Dereliction, Pollution and Contaminated Land</b>	
NATHANAIL, C. P. The role of engineering geology in risk-based land contamination management for tomorrow's cities	149
SCOTT, D. I. & HATHEWAY, A. W. The management of derelict, polluted and contaminated land	159
<b>Environmental Urban Geotechnics</b>	
JEFFERSON, I. & BRAITHWAITE, P. Environmental urban geotechnics	167
<b>Substructures and Underground Space</b>	
ROGERS, C. D. F. Substructures, underground space and sustainable urban environments	177
HUNT, D. & CHAPMAN, D. Substructures and underground space	189
<b>Geodata for the Urban Environment</b>	
HACK, R. Advances in the use of geodata for the urban environment	201

REEVES, H. J. & WEST, T. R. Geodata for the urban environment	209
<b>Infrastructure for the City and its Region</b>	
VIGGIANI, G. M. B. & DE SANCTIS, L. Geotechnical aspects of underground railway construction in the urban environment: the examples of Rome and Naples	215
SHARPE, L. & ALLENBY, D. Challenges for regional infrastructure: acceptable risk, prioritization of repair and vulnerability reduction	241
<b>Resources for the City</b>	
SCHOUENBORG, B., TANG, L. & ÅKESSON, U. Resources for the city: sustainable use of bedrock resources for concrete production with examples from Sweden	257
CRIPPS, J. C. Resources for the city	265
<b>The Future of Engineering Geology</b>	
TEPEL, R. E. The core attributes of engineering geology: a US perspective	273
GRIFFITHS, J. S. Engineering geology core values: a UK perspective	277
INOUE, D., OSHIMA, H., JSEG RESEARCH PLANNING COMMITTEE & JSEG INTERNATIONAL COMMITTEE. A perspective on the future of engineering geology in the world, Asia and Japan	281
BOCK, H. Core values, competences and issues in engineering geology: a European perspective	287
BAYNES, F. J., GRIFFITHS, J. S. & ROSENBAUM, M. S. The future of engineering geology	297
Index	303

The Geological Society endeavours to ensure that all images published contribute to the objectives of the individual papers in which they appear. In presenting pictures that illustrate a particular technical point it is recognized that authors select pictures from their own archives and from those of others. Occasionally these may illustrate practices in respect of health and safety that may not conform to current best practice in the developed world. This may be due to the age of the particular picture or the region in which it was captured – in either case the near-impossibility of replacing it is recognized by a ‘hands-off’ approach to the inclusion or otherwise of such pictures. The inclusion of such images should not be taken as an endorsement of the practices depicted by The Geological Society, the Authors or any other person or body.
