List of figures	10
List of tables	14
List of boxes	15
Abbreviations	16
Commonly used units and conversion factors	18
1 GEOPHYSICS IN CIVIL ENGINEERING	19
1.1 About this report	19
1.2 What is geophysics?	20
1.3 Benefits and limitations of geophysical investigation techniques	20
1.4 Objectives of the report	21
1.5 Report structure	21
1.6 Use of the report, its scope and coverage	22
2 GEOPHYSICS AS AN INVESTIGATIVE TOOL	23
2.1 Historical background and development	23
2.2 Basic principles of geophysical surveying	24
2.2.1 Geophysical measurements	24
2.2.2 Interpretation of geophysical data	25
2.3 Geophysics in ground investigations	27
2.4 Selection of geophysical method	32
2.5 Structural investigations	35
3 PROCUREMENT, MANAGEMENT AND REPORTING	37
3.1 UK and international practices	37
3.1.1 UK practice	37
3.1.2 International practice	38
3.2 Objectives of the principal parties to the work	38
3.2.1 Client requirements	38
3.2.2 Engineers' expectations as a user	39
3.2.3 The engineering geophysics adviser	40
3.2.4 The geophysics contractor	41
3.2.5 Value for money	41
3.3 Investigation planning	42
3.3.1 Design of investigation	42
3.3.2 Constraints on methodologies	43
3.3.3 Specification	44
3.3.4 Contract and sub-contract	44
3.3.5 Quality assurance	45
3.3.6 Data processing, modelling and interpretation	46
3.4 Inter-relationships in management and reporting	47
3.4.1 Team structure	47

3.4.2	Supervision	47
3.4.3	Deliverables	48
3.4.4	Control and communication	48
4	THE CONCEPTUAL GROUND MODEL	51
4.1	Elements of the ground model	51
4.2	Rock formation	52
4.3	Rock modification	52
4.4	Interpretation of the geophysical data	55
4.5	Geological constraints on the design of the geophysical survey	57
5	TECHNIQUES: SCIENCE AND PRACTICE	61
5.1	Electrical methods	61
5.1.1	Resistivity surveying	61
5.1.2	Laboratory measurement of resistivity	65
5.1.3	Other electrical methods	66
5.1.4	Borehole electrical methods	66
5.1.5	NDT electrical methods	68
5.2	Gravity method	68
5.2.1	Gravity surveying	68
5.2.2	Measurement of density	70
5.3	Magnetic method	70
5.3.1	Magnetic surveying	70
5.3.2	Laboratory measurement of magnetic susceptibility and remanent magnetism	73
5.3.3	Aeromagnetic survey	73
5.4	Seismic (Acoustic) method	74
5.4.1	Seismic properties	75
5.4.2	Seismic surveying	80
5.4.3	Borehole seismic (sonic) methods	84
5.4.4	Marine seismic surveying	89
5.4.5	Other seismic methods	90
5.4.6	Sonic and ultrasonic NDT methods	91
5.5	Electromagnetic methods	96
5.5.1	Electromagnetic surveying	97
5.5.2	Borehole electromagnetic methods	101
5.5.3	Airborne electromagnetic methods	101
5.5.4	NDT electromagnetic methods	102
5.6	Radiometric methods	103
5.6.1	Radiometric surveying	103
5.6.2	Borehole radiometric methods	104
5.6.3	NDT radiometric methods	106
5.7	Thermal methods	107
5.7.1	Infra-red thermography	107
5.7.2	Thermal conductivity	108
5.8	Measurement of geophysical properties of soils and rocks	109

6	DATA ACQUISITION, PROCESSING AND PRESENTATION	111
6.1	Acquisition and measurements	111
6.1.1	Improving the quality of measurement signals	112
6.1.2	The significance of errors	116
6.2	Processing and inversion techniques	117
6.2.1	Geophysical processing techniques	118
6.2.2	Inversion of measurements	118
6.2.3	The role of forward modelling	121
6.2.4	Limitations of current techniques	123
6.3	Visualisation	124
6.4	Recognition of the limitations of interpretations	124
7	GEOLOGICAL APPLICATIONS	127
7.1	Introduction	127
7.2	Geological boundaries	127
7.2.1	Depth to bedrock	127
7.2.2	Near-horizontal bedrock	128
7.2.3	Varying depth bedrock	129
7.2.4	Very shallow bedrock	133
7.2.5	Weathered bedrock	133
7.2.6	Buried valleys	135
7.2.7	Glacial tunnel-valleys	136
7.3	Geological hazards	137
7.3.1	Fracture zones and faults	137
7.3.2	Near-vertical faults	138
7.3.3	Cavities and mineshafts	139
7.3.4	Landslides	146
8	GEOTECHNICAL APPLICATIONS	151
8.1	Geotechnical properties derived from geophysical properties	151
8.1.1	Elastic modulus and Poisson's ratio	151
8.1.2	Formation density and porosity	153
8.1.3	Permeability	155
8.1.4	Characterisation from dielectric constants and permittivity	156
8.2	Geotechnical evaluation of ground conditions	156
8.2.1	Soil corrosivity	156
8.2.2	Soil stiffness profile	157
8.2.3	Rock mass quality and fracture state	159
8.2.4	Rock mass deformability	161
8.2.5	Rippability, diggability and trenchability	164
8.2.6	Liquefaction potential	167
8.3	Construction materials	167
8.3.1	Sands and gravels	168
8.3.2	Non-argillaceous rocks	169
8.3.3	Clays and argillaceous rocks	170
8.4	Foundations of structures	170

8.4.1	Ground investigations	170
8.4.2	Strength profile	172
8.4.3	Settlement estimation	172
8.4.4	Response to dynamic loading	173
8.4.5	Subsidence risk	173
8.5	Dams and reservoirs	173
8.5.1	Site location and appraisal	173
8.5.2	Investigations of dam foundations	174
8.5.3	Leakage	174
8.5.4	Ground treatment	175
8.6	Surface excavations	175
8.6.1	Excavation method	177
8.6.2	Groundwater	178
8.6.3	Slope stability	178
8.7	Subsurface excavations	178
8.7.1	Ground investigation	178
8.7.2	Investigations from within subsurface excavation	179
8.8	Route surveys	180
8.8.1	Route appraisal	180
8.8.2	Embankments, pavements and pipelines	182
8.9	Coastal and offshore engineering	183
8.9.1	Inshore surveys	183
8.9.2	Offshore surveys	185
9	GEO-ENVIRONMENTAL APPLICATIONS	187
9.1	Introduction	187
9.2	Pollution and contamination	187
9.2.1	Leachate, pollution and groundwater	187
9.2.2	Geophysical “detectability” of pollutants	188
9.2.3	Pollution pathways	189
9.2.4	Detection, monitoring and remediation	190
9.2.5	Rising groundwater levels	192
9.2.6	Abandoned mineworkings	193
9.3	Landfill sites	193
9.3.1	Geophysical surveys of landfills	193
9.3.2	Characterising landfill sites	196
9.3.3	Investigation methods	197
9.3.4	Pollution near landfills	198
9.3.5	Compaction and consolidation of landfill material	200
9.3.6	Anthropogenic gases	200
9.4	Radioactivity and radioactive waste	201
9.4.1	Natural radioactivity	201
9.4.2	Geological appraisal for radioactive waste storage	201
9.5	Aquifer Development	202
9.5.1	Sediment-filled valleys	202
9.5.2	Protection of groundwater quality	203
9.6	New methods	204

10	STRUCTURAL AND NDT APPLICATIONS TO BUILDING AND CIVIL ENGINEERING APPLICATIONS	207
	10.1 Introduction	207
	10.2 Review of techniques and applications	212
	10.2.1 Subsurface radar as a structural investigation technique	212
	10.2.2 Ultrasonic pulse velocity	213
	10.2.3 Impact echo tests, pulse echo, and seismic transmission	214
	10.2.4 Radiography	214
	10.2.5 Thermography	215
	10.3 Application examples / case Histories	216
	10.3.1 Detection of underslab voids	216
	10.3.2 GPR used to map condition on wooden structures	216
	10.3.3 Subsurface radar traverse over a buried pipe	217
	10.3.4 Subsurface radar survey on old masonry retaining wall	218
11	CONCLUDING REMARKS AND RECOMMENDATIONS FOR GOOD PRACTICE	219
	11.1 Concluding remarks	219
	11.2 Recommendations for good practice	219
	11.2.1 Planning	219
	11.2.2 Procurement	220
	11.2.3 Management	221
	11.2.4 Supervision	221
	11.2.5 Reporting	222
	11.2.6 Feedback	222
